

Interacting with matter and real-world using Matrices of Sets

Renaud Di Francesco
IEEE and IET member

Once upon a time in India ...and elsewhere

Story of the chess player or inventor and the ruler:

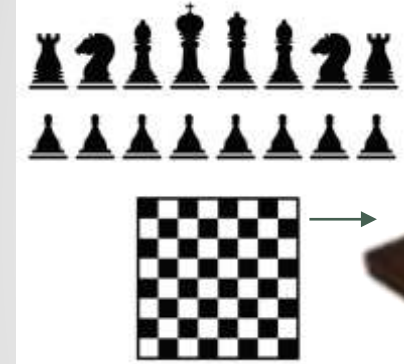

- the chess player or inventor could claim any reward,
- chose grains of rice: twice as many, moving from one box of the chessboard to the next.

The cumulated reward is the sum $1 + 2 + \dots + 2^{63} = 2^{64} - 1$

The chessboard parable

Chess Game
Mental construct

Rice grains on chessboard
REAL OBJECTS

2^0	2^1	...					2^7
2^8	...						2^{15}
2^{56}	...						2^{63}

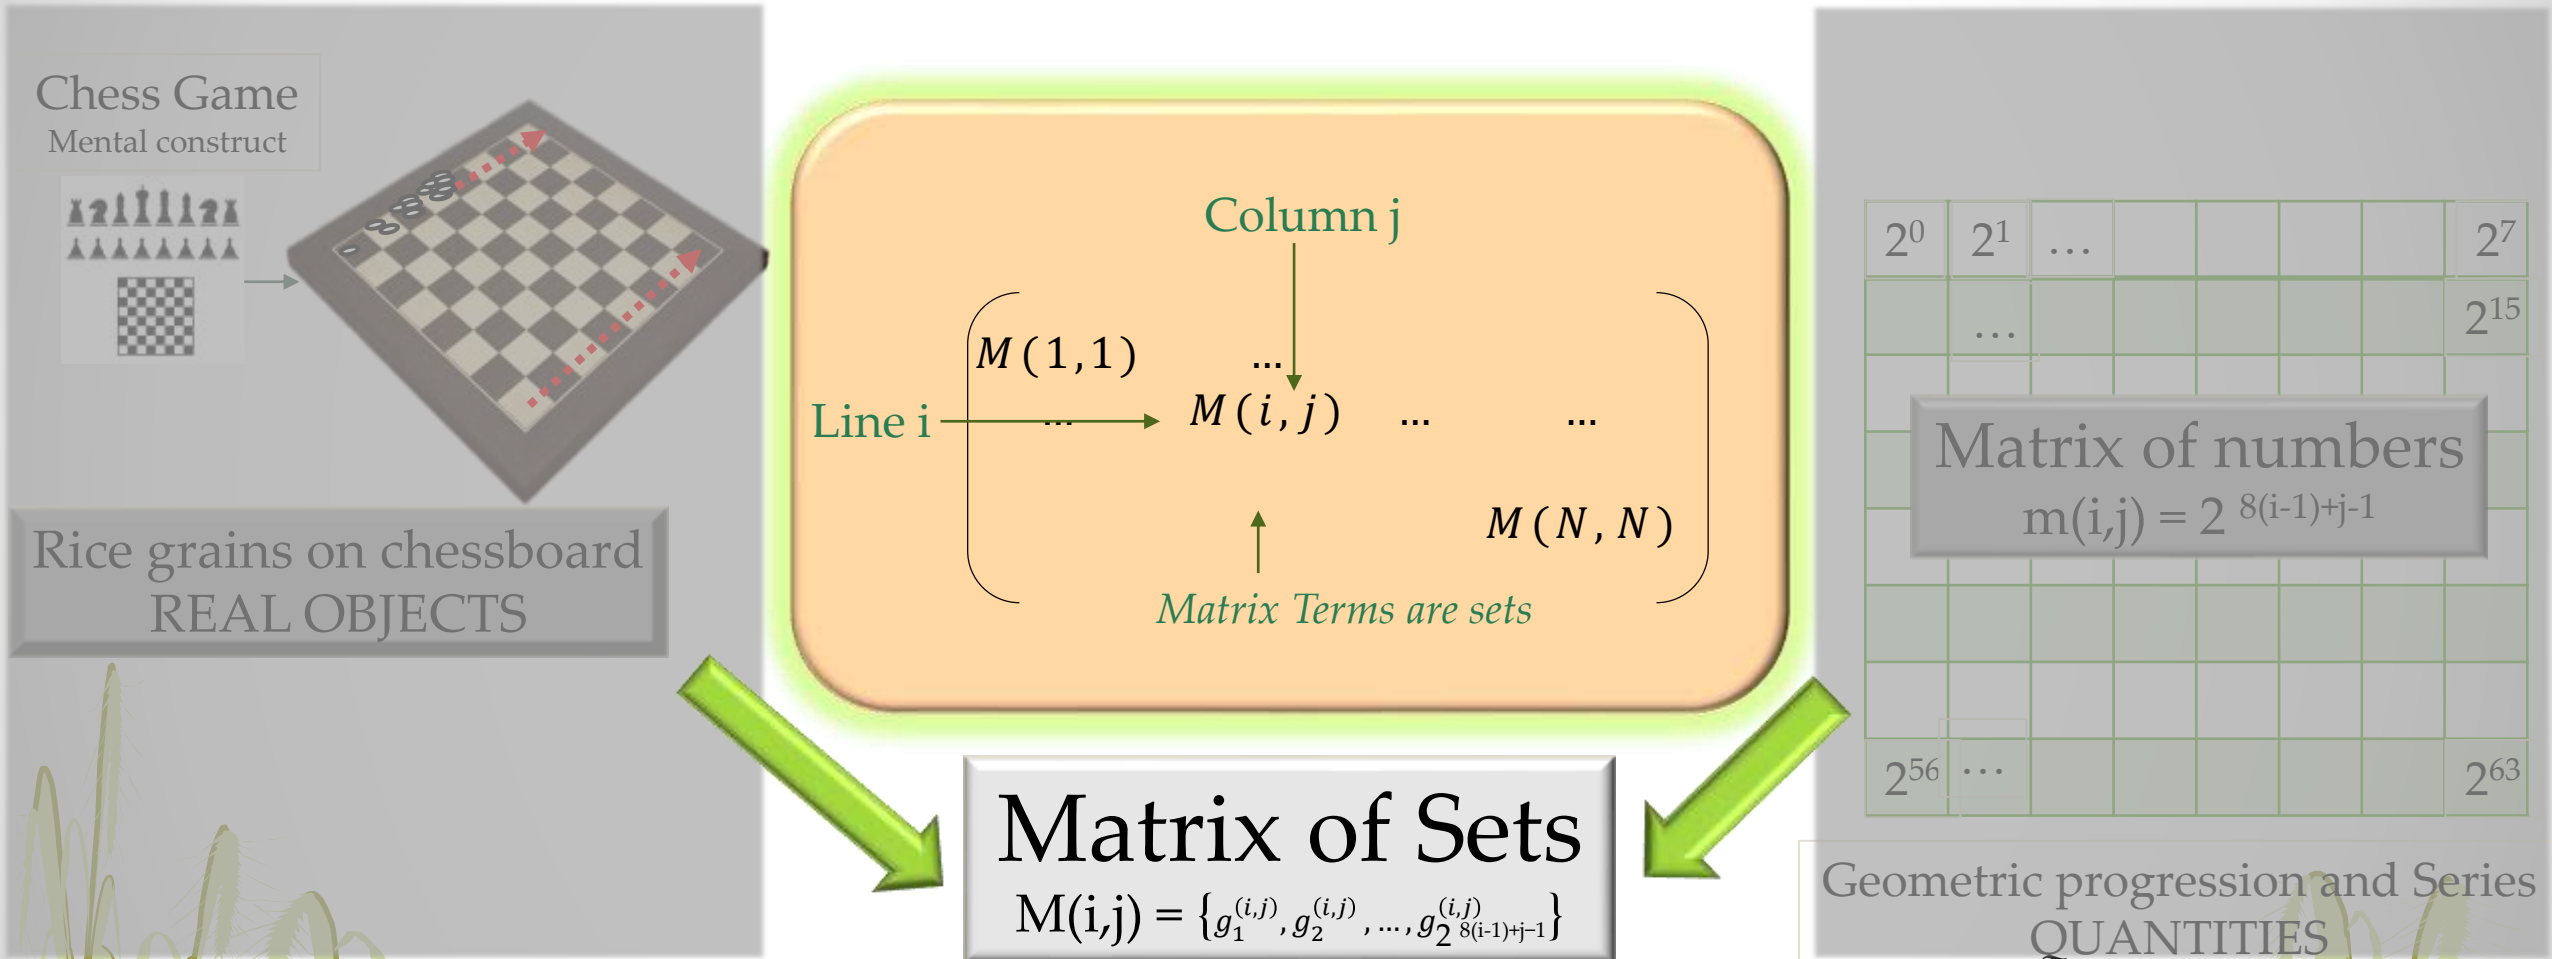

Geometric progression and Series
NUMBERS

Matrix of numbers
 $m(i,j) = 2^{8(i-1)+j-1}$

Matrices of Sets

between Objects and Quantities

Such set contains all grains $g_k^{(i,j)}$ with k ranging from 1 to $2^{8(i-1)+j-1}$
